

# Help Improve Quality of Care with EMR Access and EMR Data Files

Point32Health is requesting access to **Electronic Medical Records (EMR)** and exchange of **EMR Data Files**, to better support quality improvement and close gaps in care across patient populations.

<b>What are EMRs?</b>	EMRs are a digital version of a patient's medical history, including demographics, progress notes, immunizations, and vital signs.
<b>EMR Support We're Seeking</b>	<ol style="list-style-type: none"><li><b>1. EMR Access:</b> Allows us to manually review member-level information as needed, supporting quality initiatives. Access is requested for all LCUs/IPAs, and hospitals.</li><li><b>2. EMR Data File:</b> This population-level data file would include all health plan products and applicable Point32Health members. By using electronic records, we can streamline data access for members seeking care within your provider group.</li></ol>
<b>Why are EMR Data Files and EMR Access Important?</b>	<p>Receiving both EMR data files and EMR access enables Point32Health to have a complete picture of a member's care, as well as more accurate provider reporting and analytics.</p> <ul style="list-style-type: none"><li>• EMR access provides more comprehensive member level information for reviewing an individual member.</li><li>• EMR data files provide efficient automated population level data used for analysis and care for our members.</li></ul>
<b>How This Supports Providers</b>	EMR access and EMR data files will allow us to retrieve member information directly, saving time for providers and staff. This will ultimately improve care quality, reduce administrative burden, and close gaps across the provider patient population.
<b>Next Steps</b>	To get set up, reach out to <a href="mailto:HPHC_NMM@point32health.org">HPHC_NMM@point32health.org</a>
